- Though we strive for perfection in our installation, due to the nature of the product, some degree of dust contamination and or minor imperfections are present in every window film application, also pre-existing flaws or scratches and metal deposits on the glass are often much more noticeable after the windows are tinted.

Congratulations! Your car has been fitted with the finest window film available.

## CARE INSTRUCTIONS

- Please do not roll windows down for 2-4 days.
- Please do not press/push out any bubbles or moisture/haziness.
- The windows are cleaned after installation, so please don't wash the window film for 2 weeks.
- Window film can be cleaned using a soft cloth and any non-abrasive window cleaning solution. No alcohol, ammonia or vinegar. Our favorite brand is Sprayway.
- Feed your car lots of sunshine for the best curing results-helps dry out the moisture.
- 90% of the moisture is removed during the installation. Please allow 14 days for the film to completely cure. Any moisture or haziness is normal during this time.
